Display a menu

The screenshot shows the OpenStreetMap website interface. A modal window displays the details for 'Way: Crazy Factory (41913235)', which is located in a 'zone commerciale de chantepie' (commercial zone of Chantepie). The way is edited over 1 year ago by user 'etno'. The 'Tags' section lists various key-value pairs such as address components (city: Chantepie, country: FR), building type (yes), name (Crazy Factory), and shop type (clothes). Below the tags is a list of 'Nodes' with their respective IDs. The main map view shows the location of the Crazy Factory building at address 6 Rue du Moulin, Chantepie, France. The building is highlighted with an orange polygon. The map also shows surrounding streets like Rue du Moulin, Rue du Lac, and Les Loges, along with other buildings and landmarks like Decathlon and an insurance shop.

Afficher N°

UrbanDive

The screenshot shows a PagesJaunes.fr listing for 'Crazy Factory' located at 'Zac Des Loges 6 à Moulin, 35135 CHANTEPIE'. The listing includes a phone number and a link to 'Afficher N°'. Below the listing is an image of the building's exterior, which is a large industrial-style structure with multiple signs, including 'CRAZY FACTORY' and 'G-STAR'. There is also a small inset map showing the building's location. At the bottom of the page, there is a schedule for opening hours: Mercredi - 10:00 - 19:00, Jeudi - 10:00 - 19:00, Vendredi - 10:00 - 19:00, Samedi - 10:00 - 19:00.

This page presents physical **features** on the ground (e.g., roads or buildings) using **tags** attached to its basic data (**nodes**, **ways**, and **relations**). Each tag describes a geographic attribute of the feature being shown by that node, way, or relation.

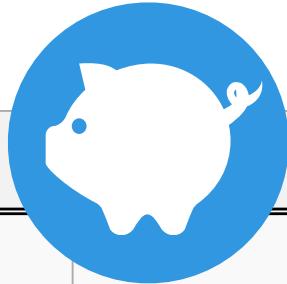

Tags are free text entries that allow the map to include an unlimited number of attributes describing each feature. This is done through community agreement on standard combinations for the most commonly used tags, which act as informal standards. However, there are many ways to improve the style of the map or to support analyses that rely on previously unmapped features. Descriptions of tags that relate to particular topics or interests can be found using the [feature search](#).

Most features can be described using a small number of tags, such as a path with a classification tag such as `highway=footway`, a building with a name tag such as `name=*`. But, since this is a worldwide, inclusive map, there can be many different feature types.

For details of more tags and proposed changes to existing tags see [Proposed features](#) and [Deprecated features](#). If you do not find a suitable tag in this list then feel free to propose one. Tags will be accepted as long as the tag values will be [verifiable](#). Over time, you may find that the tag name is changed or removed. This is normal. In the census, however many good tags were used first and documented later. Information about the history of tags can be found in the [tag history](#).

The screenshot shows a map of New York City and surrounding areas, specifically highlighting abandoned theme parks. A callout box is open over a location in the Bronx, labeled 'Holy Land USA'. The box contains the following information:

- NAME**: Holy Land USA
- WIKIPEDIA**: en:Holy Land USA

The map also features a legend in the top left corner with a red square icon and the number 7. In the bottom left, there are buttons for "Change basemap" and "Options". The bottom right corner displays the "CartoDB attribution" logo.

The map displays several blue location markers (pins) indicating the locations of abandoned theme parks. The pins are located in the following approximate coordinates:

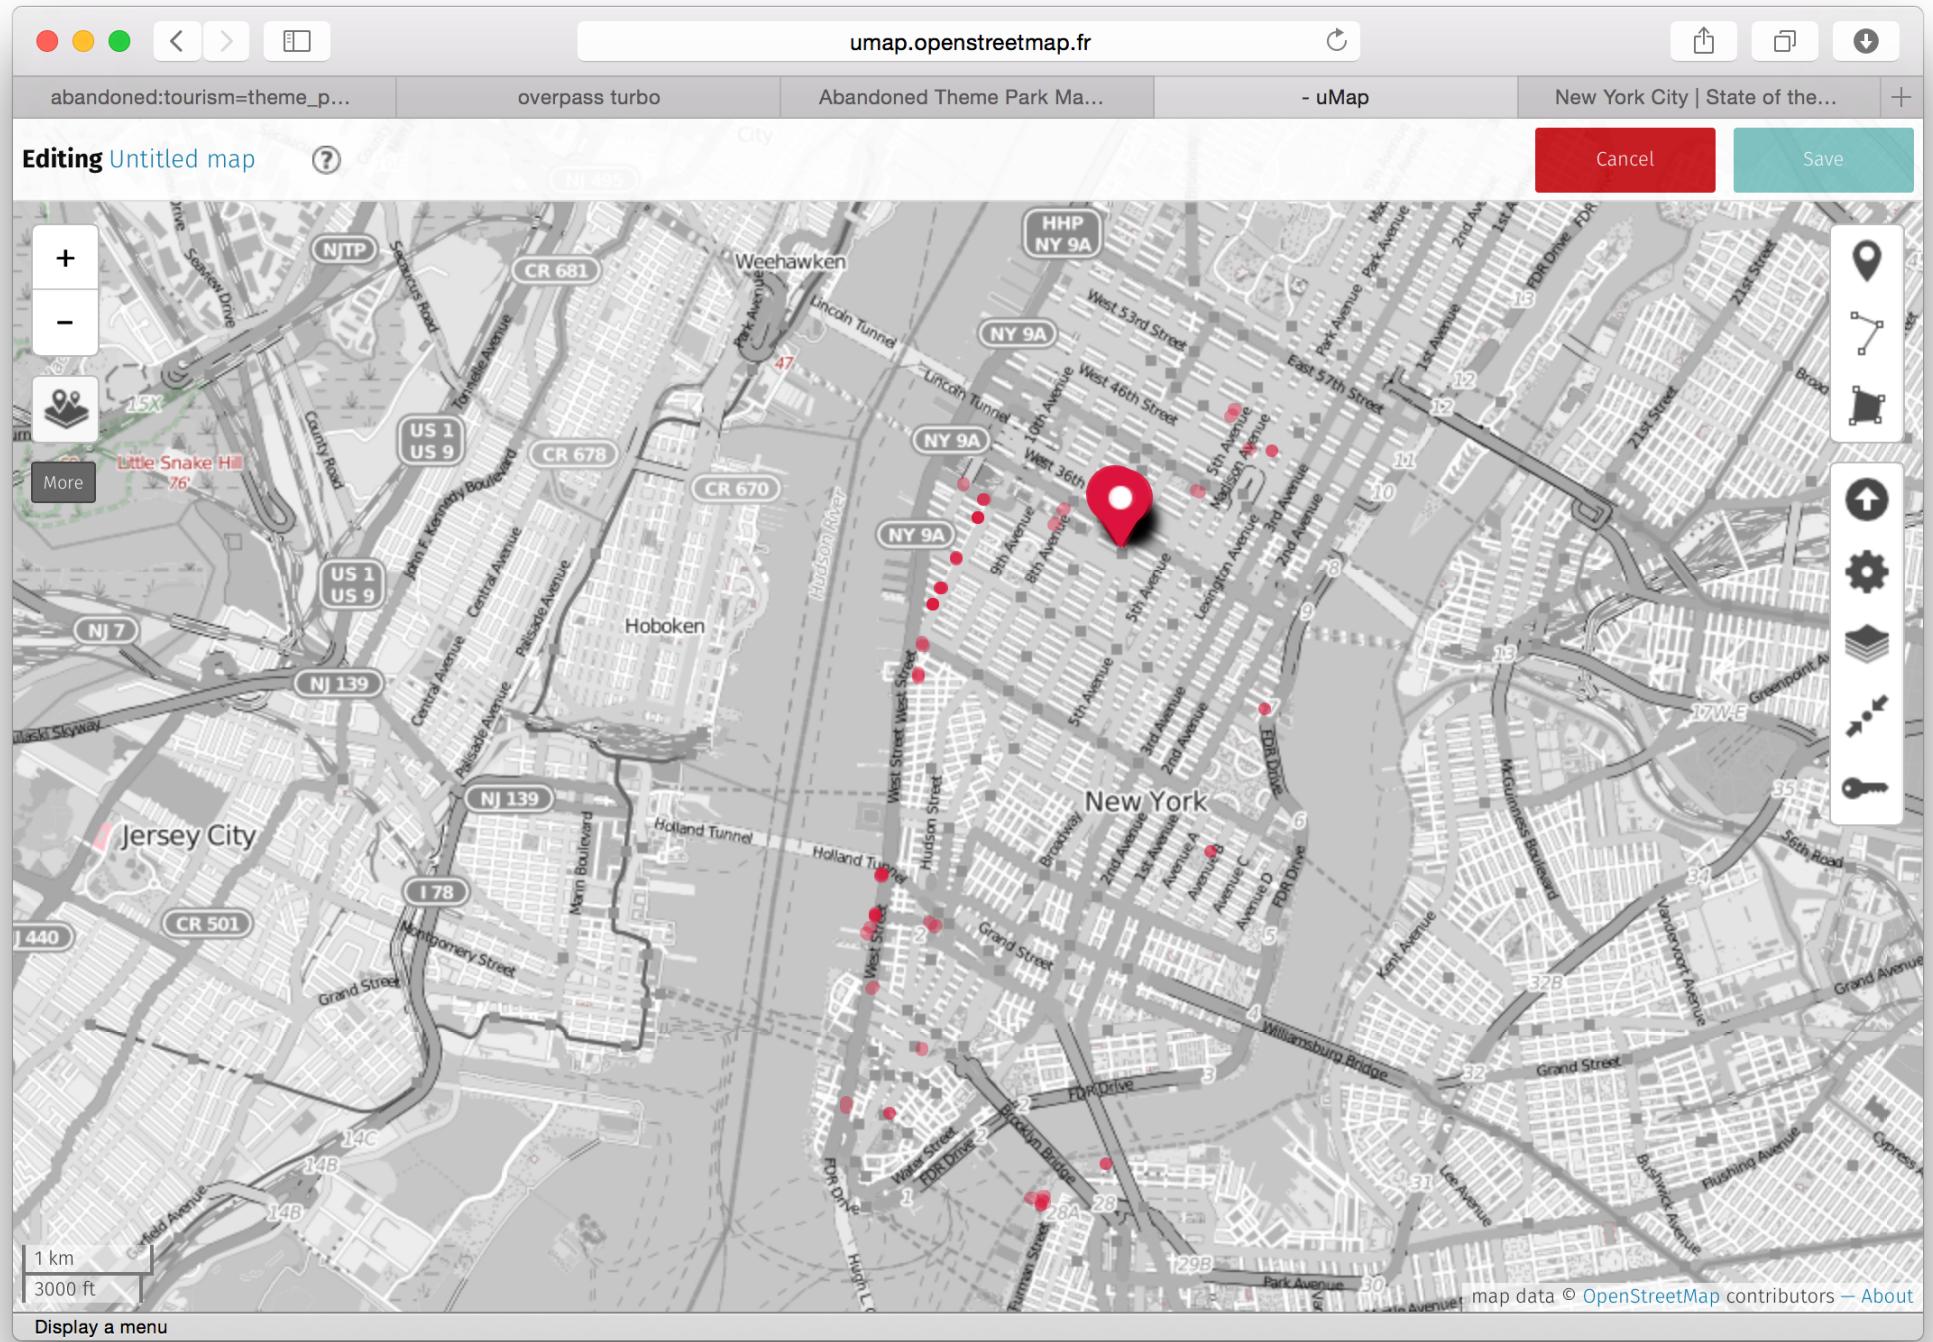

- North America: Hudson Bay (top), Labrador Sea (top), Gulf of Mexico (center), Caribbean Sea (center), and Brazil (bottom).
- Europe: United Kingdom (center), France (center), Italy (center), and Russia (top-right).

Display a menu

A screenshot of a web browser displaying the Mapzen website. The address bar shows 'mapzen.com'. The page title is 'Mapzen · an open-source mapping lab.' and the subtitle is 'New York City | State of the Map US 2015'. The main navigation menu includes 'PROJECTS', 'DATA', 'BLOG', 'ABOUT', and 'DEVELOPERS'. The central visual element is a large, dark-toned map of New York City featuring a dense grid of 3D white buildings representing building footprints. Below this image, the text 'an open-source mapping lab' is displayed in a large, bold, reddish-brown font. A smaller, gray text below it reads: 'Mapzen builds open-source mapping tools and collaborates on open geodata initiatives.' At the bottom of the page, there is a thin horizontal red line with a small red circle containing a white icon in the center.

Mapzen · an open-source mapping lab.

mapzen.com

Data · Mapzen New York City | State of the Map US 2015 +

The screenshot shows a web browser window for mapzen.com. The top navigation bar includes standard icons for window control, a lock for security, and links for the current page and other sections like 'New York City' and 'State of the Map US 2015'. Below the header, there are two main sections. The left section, titled 'Metro Extracts', features a grayscale map of New York City with a red dashed rectangular outline highlighting a specific area. A red button labeled 'DOWNLOAD EXTRACTS' is positioned below the map. The right section, titled 'Borders', contains a world map with various countries outlined in different colors (e.g., green, blue, red, yellow). A red button labeled 'DOWNLOAD BORDERS' is located at the bottom of this section. A small compass icon is centered between the two main sections.

Metro Extracts

City-sized parts of the [OpenStreetMap](#) database, served up weekly. The goal is to make it easier to get started with manageable, relevant, and local data so we can all build cool stuff.

[DOWNLOAD EXTRACTS](#)

Borders

Country, region and city boundary data from OpenStreetMap, served monthly. All the administrative hierarchies you never knew you needed, all delivered in delicious GeoJSON.

[DOWNLOAD BORDERS](#)

New York City | State of the Map US 2015

Now it's even easier to get local data so you can start building cool stuff. Each week, we automatically extract the latest OpenStreetMap data into manageable, metro-area shapefiles in a variety of formats for you to use.

Don't see your city? Contribute by submitting a pull request on our list of cities, or just ask by opening a new issue.

Need help? Check out our blog post!

Mapzen Metro Extracts are produced via a [chef cookbook](#) derived from the work of Michal Migurski.

Use with command line tools to import, query, & generate custom extracts

Use when having everything pre processed work best

Step 1: Convert pbf to o5m for filtering

```
$ osmconvert disney.pbf -o=disney.o5m
```

Step 2: Filter for parking data

```
$ osmfilter disney.o5m --keep="amenity=parking" -o=parking.osm
```

Step 3: Convert to GEOJSON if needed

```
$ ogr2ogr -f GeoJSON disney.geojson disney.osm multipolygons
```

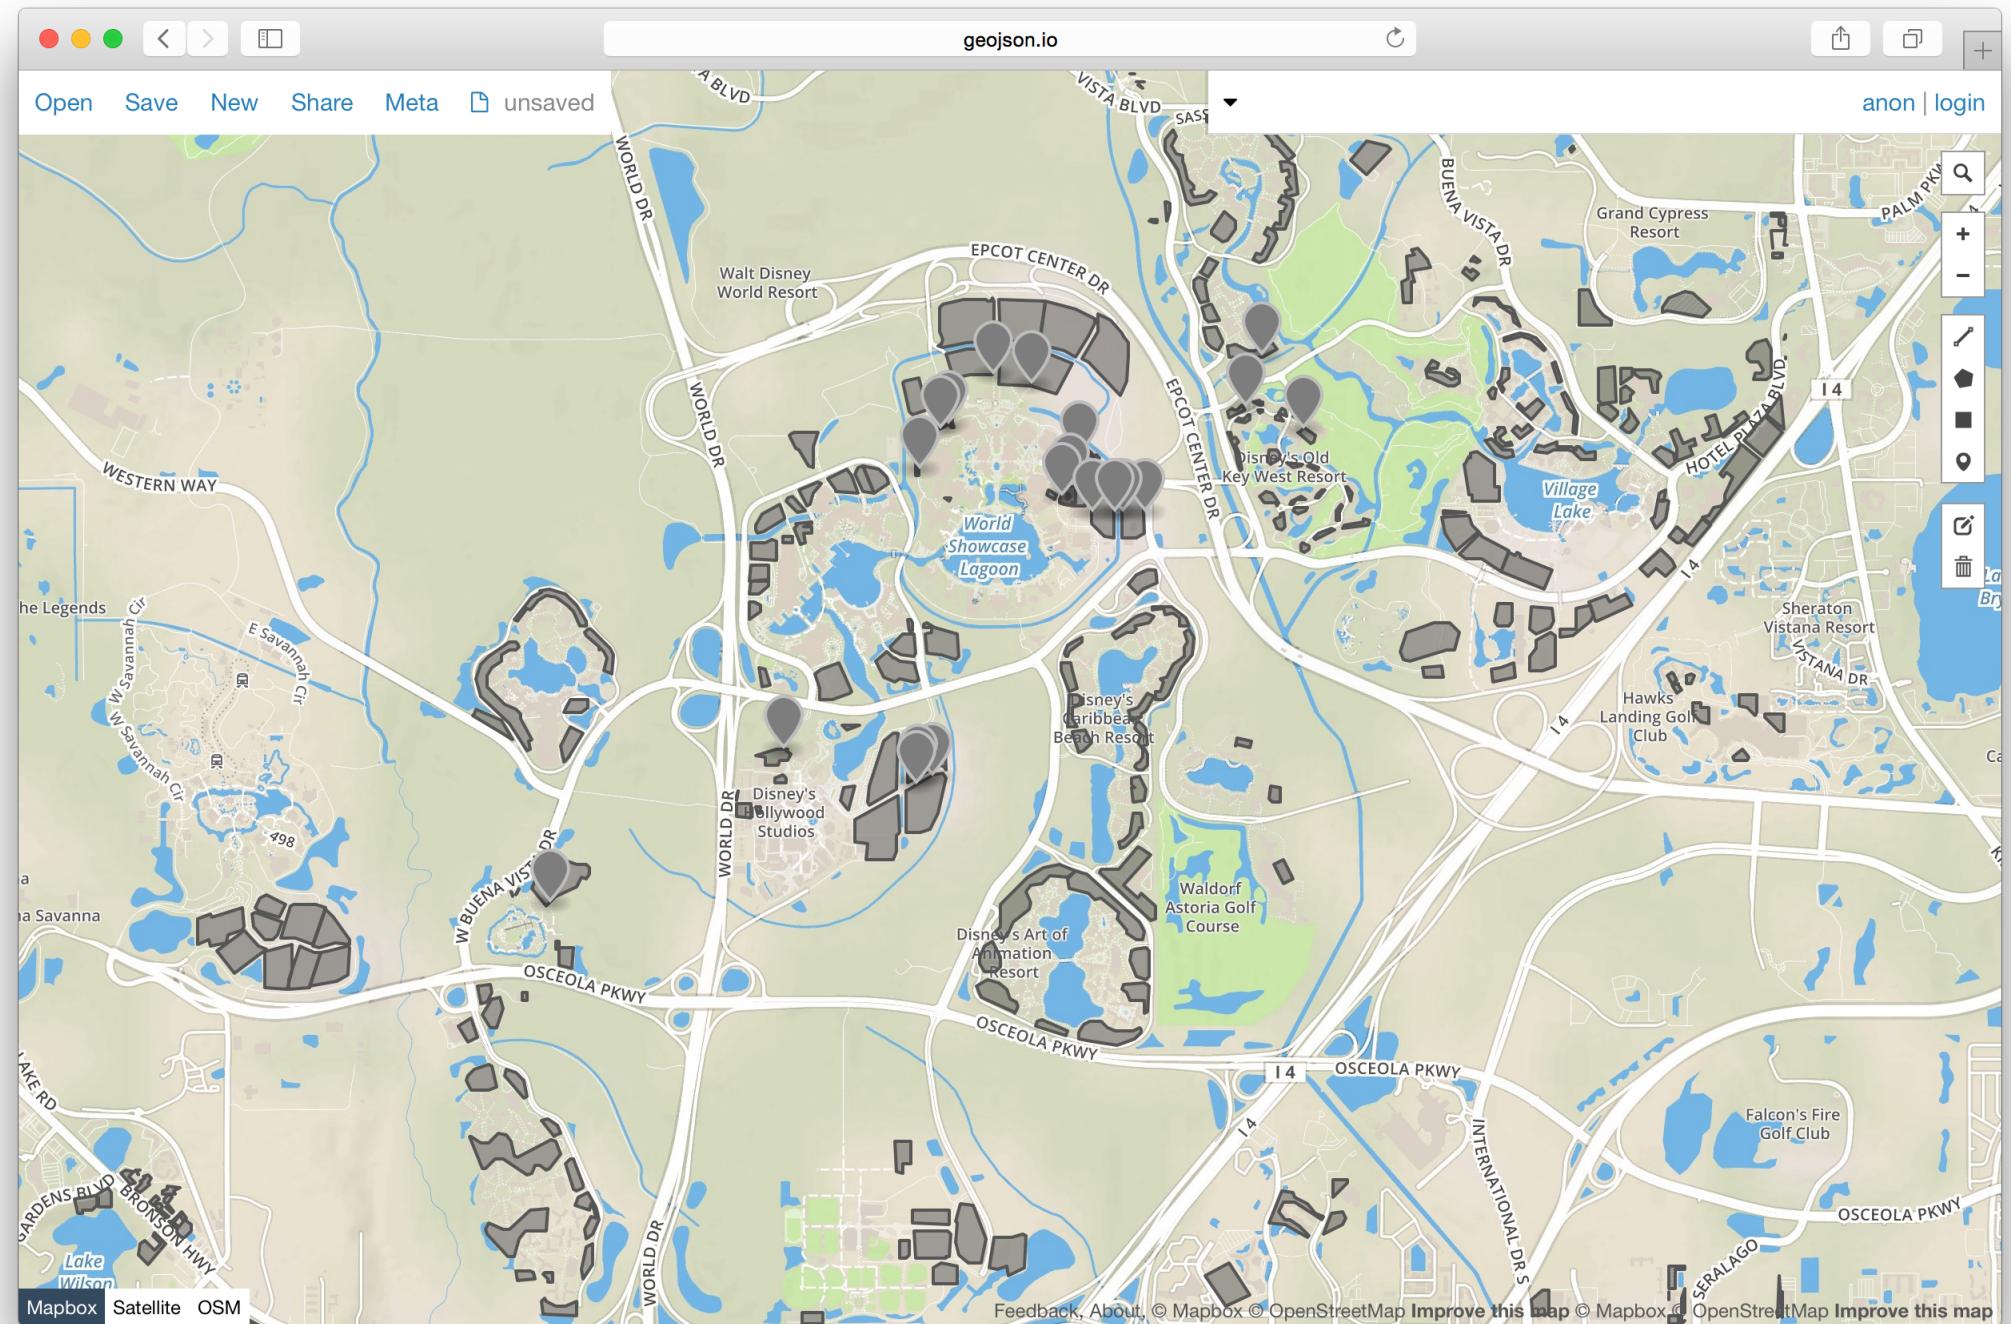

Step 4: Visit geojson.io to visualize the output

<http://wiki.openstreetmap.org/wiki/Osmfilter>

<http://wiki.openstreetmap.org/wiki/Osmconvert>

< DATA

Borders

Country, region and city boundary data from OpenStreetMap, served monthly.

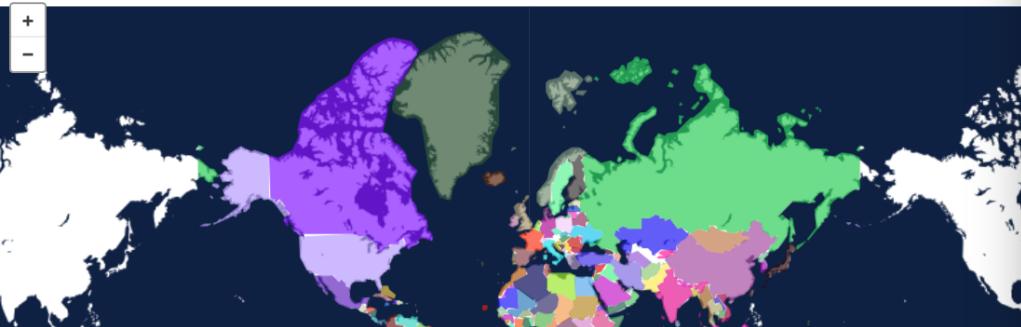

— 

Each country link contains a zipped directory of geojson files, each describing increasingly detailed administrative boundaries. The hierarchy varies by country but in the United States, admin layer 2 describes the national boundary, layer 4 is states, layer 6 is counties, and layer 8 is cities. The OSM wiki has specifics for each country.

Check out the [OSM wiki](#) for more information on admin levels.

Full planet file available [here](#).
